RESOLUTION NO. 02-24

RESOLUTION 02-24 OF THE BOARD OF DIRECTORS OF THE RIO ALTO WATER DISTRICT AMENDING ARTICLE 9 OF RESOLUTION 9-73 (AND ALL ASSOCIATED RESOLUTIONS ESTABLISHING RULES AND REGULATIONS FOR THE COLLECTION AND TREATMENT OF SEWAGE) TO CHANGE SEWER RATES.

WHEREAS, the Rio Alto Water District did provide, on November 22, 2023, a written notice by mail to all affected sewer customers in accordance with the requirements of State Law; and

WHEREAS, the Rio Alto Water District did properly notice a public hearing to be held on January 17, 2024 at 6:30 p.m.; and

WHEREAS, the Rio Alto Water District did conduct the above scheduled hearing at the specified time and date; and

WHEREAS, the Rio Alto Water District opened the Public Hearing at 6:30 p.m., and closed the Public Hearing 7:05 p.m. after receiving verbal comments, now therefore

BE IT RESOLVED, that in lieu of a majority written protest, Article 9 of Resolution 9-73, a resolution establishing the rules and regulations for the collection and treatment of sewage shall be amended in accordance with Exhibit A, (Water and Wastewater Rate Study 2023 prepared by Bartle Wells Associates, Page 2, Table 2 with Amended Implementation Dates) attached and incorporated herein to:

- 1. Increase Sewer Rates over a 5-year period to better reflect revenue requirements and the cost of service, including operational, capital cost and debt funding needs as proposed in Page2, Table 2 with Amended Implementation Dates of Water and Wastewater Rate Study 2023 prepared by Bartle Wells Associates;
- 2. New rates are proportionate, fair, and equitable to all customers;
- 3. New rates comply with the substantive requirements of the California Constitution, Article 13D, Section 6 (which was adopted by the voters as Proposition 218 in 1996 and general mandate of Article 10, Section 2) that prohibits the wasteful use of water;
- 4. New rates support the long-term operational and financial stability of the District.

RESOLVED FURTHER, that Resolution 02-24 and Exhibit A (Water and Wastewater Rate Study 2023, prepared by Bartle Wells Associates Page 2, Table 2 with Amended Implementation Dates) shall replace any previous resolutions and schedules amending Article of Resolution 9-73 and shall become effective March 3, 2024.

PASSED AND ADOPTED by the Rio Alto Water District Board of Directors at its regular meeting on January 17, 2024, by the following vote:

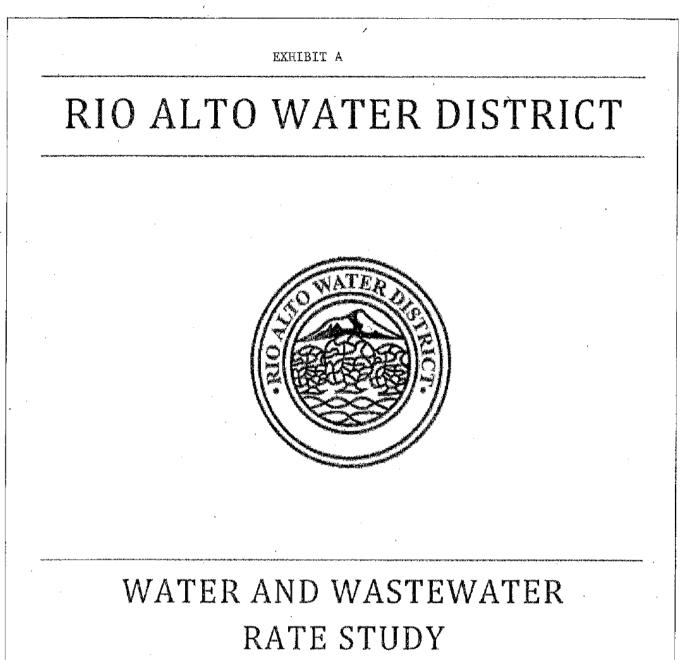

AYES: 4 NOES: 0 ABSTAINING: 0 ABSENT: 1

Signed and approved by me after its passage this 17th day of January, 2024.

Richard Breelak

Richard Brubaker, President, Board of Directors

Re: Water and Wastewater Rate Study

Bartle Wells Associates is pleased to submit to the Rio Alto Water District (District) the attached Final Water and Wastewater Rate Study. The study presents BWA's analysis of the operating and non-operating expenses of the District's water and wastewater funds and provides five-year cash flow projections and rates. The primary purpose of this study was to analyze the District's water & wastewater enterprise funds and make recommendations that would achieve their financial sustainability.

BWA finds that the rates and charges proposed in our report reflect the cost-of-service for each customer, follow generally accepted rate design criteria, and adhere to the substantive requirements of Proposition 218. BWA believes the proposed rates are fair and reasonable to the District's customers.

We have enjoyed working with the District on this rate study and appreciate the assistance of District staff members throughout the project. Please contact us with any future questions about this study and the rate recommendations.

Sincerely,

Douglas Dove, PE, CIPMA Principal/ President

Eith Wil

Erik Helgeson, MBA Vice President

1 EXECUTIVE SUMMARY

1.1 Introduction

The District retained Bartle Wells Associates to develop a long-term financial plan and 5-year rate recommendations for the water and wastewater enterprises.

The revenues from the District's water and wastewater enterprises are primarily derived from charges for services. The District must establish rates and charges adequate to fund the cost of providing services, which includes costs for operations and maintenance, as well as capital improvements needed to keep the District's utility infrastructure in a safe and reliable operating condition.

The District has provided proactive financial stewardship by raising rates to keep revenues in line with the costs of providing water service. Those rate increases have enabled the District to maintain its financial health. The prior water rate increases strengthened the financial condition of the water enterprise. However, current rates are not adequate to fund the needed improvements and meet regulatory water quality and supply requirements.

1.2 Rate Study Objectives

Key goals and objectives of this study include developing rates that:

- Recover the costs of providing service, including operating, capital, and debt funding needs;
- Are proportionate, fair, and equitable to all customers;
- Are easy to understand and implement;
- Comply with the substantive requirements of the California Constitution, Article 13D, Section 6 (which
 was adopted by the voters as Proposition 218 in 1996) and the general mandate of Article 10, Section 2
 that prohibits the wasteful use of water;
- Support the long-term operational and financial stability of the District.

BWA worked closely with District staff to incorporate information and input, evaluate alternatives, and develop recommendations. This report summarizes key findings and recommendations for water and wastewater rates over the next five years.

1.3 Current and Proposed Water Rates

BWA recommends the District consider transitioning to a uniform water rate structure. The following table shows the current and proposed water rates.

Table 1 - Current and Proposed Water Rates

Current and Proposed Water Rates	Existing FY 22-23	Proposed Jan 1, 2024	Proposed Jul 1, 2024	Proposed Jul 1, 2025	Proposed Jul 1, 2026	Proposed Jul 1, 2027

Table 2 - Current and Proposed Wastewater Rates

BACKGROUND, OBJECTIVES, AND LEGAL REQUIREMENTS 2

The Rio Alto Water District (District) is located east of I-5 about 20 miles south of the City of Redding in a community known as Lake California. The District provides water and wastewater services to over 1,400 customers in an area that encompasses more than 9 square miles.

The revenues from the District's water and wastewater utilities are primarily derived from charges for services. The District must establish rates and charges adequate to fund the cost of providing water and wastewater services, including costs for operations and capital improvements needed to keep District's utility infrastructure in safe and reliable operating condition.

The previous sewer rate study was performed in 2011 and the previous water rate study was last performed in 2016. Based on a survey of regional water and wastewater agencies, the District's rates are close to the regional average.

The District's water and wastewater utilities are financially self-supporting enterprises. Revenues are derived primarily from rates. As such, the District's water and wastewater rates must be set at adequate levels to fund the costs of providing service and:

- Fund ongoing operating and maintenance expenses
- Address regulatory requirements
- Fund the capital improvement projects, related debt service and associated increased operating costs
- Provide funding for system maintenance and upgrades •

The prior water and wastewater rate increases strengthened the financial condition of the enterprises. However, current rates are not adequate to fund the needed improvements and operating costs and meet debt coverage requirements.

2.1 Rate Study Objectives

In 2023, the District retained BWA to develop a cost-of-service based rate study. The District has historically adopted rate increases in order to keep revenues in line with the escalating costs of providing service. Key goals and objectives of this study include developing rates that:

- Recover the costs of providing service, including operating, capital, and debt funding needs;
- Are proportionate, fair and equitable to all customers;
- Are easy to understand and implement;
- Comply with the substantive requirements of the California Constitution, Article 13D, Section 6 (which was adopted by the voters as Proposition 218 in 1996) and the general mandate of Article 10, Section 2 that prohibits the wasteful use of water;
- Support the long-term operational and financial stability of the District.

2.2 Rate Study Process

The general process used for this cost-of-service rate study is summarized in the following diagram.

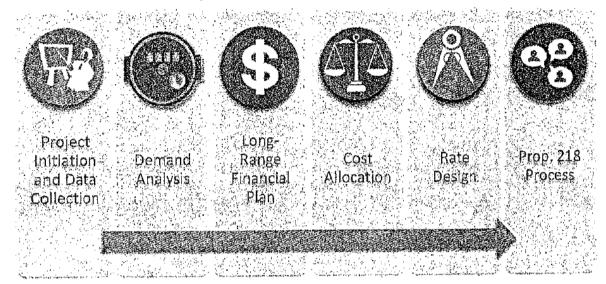

Figure 1 – Cost-of-Service Rate Study Process

Key elements of the study include:

- 1) Project Initiation and Data Collection Review financial policies; collect financial and other relevant data; and review rate structures;
- 2) Demand Analysis Analyze past customer demands and customer characteristics to forecast future demands;
- 3) Long Range Financial Plans Develop financial projections to evaluate annual revenue requirements from rates and the overall level of rate increases needed to fund the costs of providing service and support long-term financial stability;
- 4) Cost Allocation -- Group the District's costs in terms of the function they serve as a basis to proportionally allocate the revenue requirement from rates;
- 5) Cost-of-Service Rate Design Develop rates that proportionately recover costs; and
- 6) Prop 218 Process Ensure compliance with the substantive and procedural requirements of Proposition 218.

2.3 Constitutional Requirements for Rates

The water rates proposed in this report are designed to comply with two key articles of the California Constitution: Article 13D and Article 10, as explained below.

2.3.1 Article 13D, Section 6

Proposition 218 was adopted by California voters in 1996 and added Articles 13C and 13D to the California Constitution. Article 13D, Section 6 governs property-related charges, which the California Supreme Court has ruled, includes rates imposed for water delivered through pipes connected to property. Article 13D, Section 6 establishes both a) procedural requirements for imposing or increasing property-related charges, and b)

substantive requirements for those charges. Article 13D requires voter approval for new or increased propertyrelated charges but exempts rates for water, wastewater, and garbage service from this voting requirement if rates are adopted by the appropriate procedure and meet the substantive requirements. This report recommends water rates designed to comply with the substantive requirements of Proposition 218.

The substantive requirements of Article 13D, section 6 requires property-related charges, such as the District's water and wastewater rates, to meet the following conditions:

- 1) Revenues derived from the fee or charge shall not exceed the costs required to provide the propertyrelated service.
- 2) Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed.
- 3) The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel.
- 4) No fee or charge may be imposed for a service unless that service is used by, or immediately available to the property in question.
- 5) No fee or charge may be imposed for general governmental services, such as police or fire services, where the service is available to the public at large in substantially the same manner as it is to property owners.

2.3.2 Article 10, Section 2

Article 10, Section 2 of the California Constitution states that:

It is hereby declared that because of the conditions prevailing in this State the general welfare requires that the water resources of the State be put to beneficial use to the fullest extent of which they are capable, and that the waste or unreasonable use or unreasonable method of use of water be prevented, and that the conservation of such waters is to be exercised with a view to the reasonable and beneficial use thereof in the interest of the people and for the public welfare.

2.4 Statute of Limitations

Pursuant to California Government Code 53759, there is a 120-day statute of limitations for challenging any new, increased, or extended fees. This statute of limitations applies to the water rates proposed in this rate study and is included in the Proposition 218 Notice.

3 PROJECTED WATER DEMAND AND CUSTOMER CHARACTERISTICS

3.1 Projected Water Demand

BWA uses a conservative approach when forecasting water use and growth projections in order to ensure the District is not dependent on population growth and water demand recovering from the recent drought. Projected FY 23/24 water demand is conservatively based on the lowest actual metered demand for the last five fully recorded years.

Customer Data	FY 17-18	FY 18-19	FY 19-20	FY 20-21	FY 21-22	FY 22-23	FY 23-24
Noviel Algorization (Constitution) and a constitution of marine and an and a solution of the s	Actual	Actual	Actual	Actual	Actual	Projected	Projected
Total Water Production (CCF)	254,283	248,214	268,254	271,507	246,452	227,070	226,614

Annual Metered Use (CCF) per Accoun	175	168	184	178	165	165	165

Table 3 – Historic and Projected Metered Demand

3.2 Water Services and Equivalent Capacity

The size of a customer's meter reflects the demand they require of the water system's capacity. A significant percentage of the costs of any water system is related to its requirement to deliver water to any customer instantaneously at any time, up to the maximum safe flow capacity of a customer's meter. Simply put, as the size of a customer's water meter increases, the instantaneous demand it can place on the District's water system increases. A meter equivalent unit (MEU) is the ratio of any meter's safe maximum flow to that of a 3/4" meter's. The safe maximum flow is based on the American Water Works Association's meter service equivalent standards. The proposed fixed rates by meter size are determined based on the number of MEU's. The following Table shows the current number of water accounts by meter size and the corresponding meter equivalent units.

	· •	Vleter Equivalent	Meter Equivalent
Meter Size	Services	Ratio**	Units (MEUs)
3/4"	1,226	1.0	1,226.0
1"	180	1.7	300.6
2"	6	5,3	32.0
Total	1,412.0		1,558.6

Table 4 – Water Customers and Equivalent Demand Units

* Customer data as of June 2023 provided by staff

** Capacity factors based on AWWA operating capacity standards by meter size

WATER FINANCIAL PLAN 4

4.1 Water Financial Overview

BWA conducted an independent evaluation of water enterprise finances and concluded the previous rate increases have put the water enterprise in a sound financial position. Continual, gradual increases are projected to maintain its strong financial position.

The District relies almost solely on revenues from water rates to fund the costs of providing service. As such, water rates must be set at levels adequate to fund the costs of operating and maintaining the water system, and fund necessary capital improvements to keep the water system in good operating condition.

4.2 Key Drivers of Rate Increases

The District is facing several manageable financial challenges that will drive the need for rate increases in upcoming years. Key drivers of future rate increases are summarized below.

Capital Improvement Funding Needs

The District's water system requires a steady stream of repair and improvement projects. Accounting for construction cost inflation, the District anticipates funding approximately \$1.7 million of capital improvement projects over the next 5 years.

Ongoing Operating Cost Inflation

The District faces annual cost inflation due to annual increases in a range of expenses including staffing, utilities, insurance, supplies, etc. On top of rate increases needed for capital improvements, annual rate increases are needed to keep revenues aligned with cost inflation and prevent rates from falling behind the cost of providing service. Water cost inflation has historically been higher than the Consumer Price Index (CPI) for consumer goods and services. Historically inflation has typically remained consistently around 3%, but recently inflation has reached forty-year highs with the CPI and ENR CCI exceeding 7% in 2022. It is not expected that inflation will remain at such high levels in the future, so for the purposes of this rate study, average annual inflation is projected to be 4.5%.

Water Reserve Funds

Maintaining a prudent minimal level of fund reserves provides a financial cushion for dealing with unanticipated expenses, revenue shortfalls, and emergency capital repairs. BWA developed a financial plan designed to maintain prudent reserve levels that are in-line with water utility industry standards.

Debt Service Coverage

Most municipal debt requires that the issuer generate net operating revenues of 1.25 times the total annual debt service payment or greater. This is referred to as "debt service coverage". To support a strong credit rating and good financial health, the current BWA recommends the District maintain a minimum debt coverage ratio of 1.3 times the annual payment or greater.

4.3 Financial Plan Assumptions

The financial projections incorporate the latest information available and a number of reasonable and slightly conservative assumptions for planning purposes. Key assumptions include:

Revenue Assumptions

- Water rate revenues are based on estimated revenues for the current fiscal year.
- Rates proposed to be adopted in December 2023 will be effective on January 1, 2024, with rate adjustments planned to become effective on July 1 of each of the subsequent four fiscal years beginning July 1, 2024.
- To be conservative and ensure revenues will be sufficient, BWA assumed growth to be two new single family connections added per year.
- Interest earnings are projected based on the annual beginning fund balance multiplied by the projected interest rate. The interest rate projections are conservatively based on recent and anticipated interest rates.

Expense Assumptions

- Operating and maintenance costs are primarily based on the 2023/24 budget.
- Operating costs are projected to escalate at 4.5% per year to account for cost inflation.
- Debt service projections are based on outstanding debt schedules and projected issuances of new debt.
- Capital improvement costs are based on the most recent engineering cost estimates. Capital costs include a 4.5% annual construction cost inflation factor for the next five years.

4.4 Cash Flow Projections

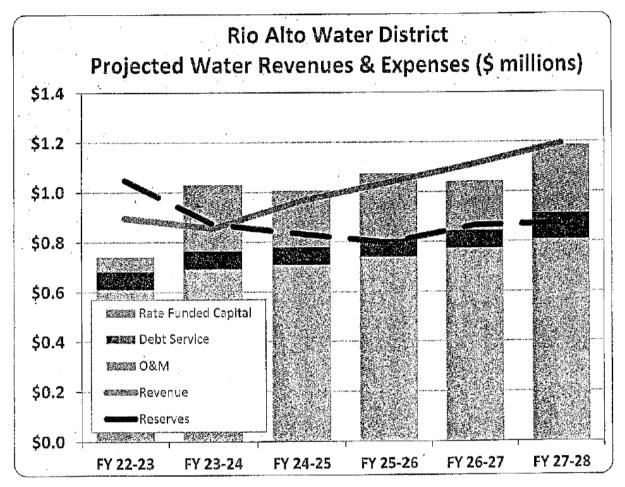

Long-term cash-flow projections were developed based on assumptions and key drivers of future rate increases described above. The projections were used to determine the water utility's annual revenue requirements and project required water rate revenue increases. The long-term cash-flow projections incorporate the latest information available from the District's budget, annual reports, capital spending projections, and metered water demand data, as well as a number of reasonable assumptions developed with input from the District's cost of providing service and maintain roughly balanced budgets, healthy debt service coverage, and prudent reserves. The projections indicate the need for increases for water rate revenues for each of the next five fiscal years. Actual impacts to customers' water bills will vary based on meter size and water use, due to the outcome of the updated cost-of-service analysis.

In future years, the District can re-evaluate its finances and revenue requirements and adjust rates as needed based on updated projections. However, while the District always has the flexibility to implement rate adjustments that are lower than adopted pursuant to Proposition 218, future rates cannot exceed adopted increases without going through the Proposition 218 process again. Rates adopted pursuant to Proposition 218 are essentially future rate caps.

The following figure visually depicts the cash-flow projections with the proposed rate increases for the next five years. Projected expenses are summarized into key categories. The figure also shows the projected fund reserves at the end of each fiscal year.

Detailed, long-term, cash-flow projections for this scenario are shown in the following table.

Water Fund	FY 22-23	FY 23-24	FY 24-25	FY 25-26	FY 26-27	FY 27-28

*Reflects January rate Implementation

5 COST-OF-SERVICE RATE DERIVATION

Article XIII D, Section 6 of the California Constitution (which was adopted by the voters in 1996 as a part of Proposition 218) requires that the District adopt only rates that meet a number of substantive requirements.

Specifically:

- (1) Revenues derived from the water rates cannot exceed the funds required to provide water service.
- (2) Revenues derived from the water rates cannot be used for any purpose other than providing water service.
- (3) The amount of the water rates imposed upon any parcel or person as an incident of property ownership cannot exceed the proportional cost of the service attributable to the parcel.
- (4) Water rates may not be imposed unless the water service is used by, or immediately available to, the owner of the property in question.

Each water customer in the District is charged both a bi-monthly fixed rate and a volumetric rate based on the quantity of water delivered by the District to the customer. This reflects that (i) some system costs are based entirely on the actual quantity of water consumed, (ii) other system costs are fixed from the point of view of the District, but are a result of design decisions that were made to accommodate all users, including high-demand users, and (iii) some costs, particularly the cost of administering the water system, would be largely the same regardless of the volume of water consumed.

Water utilities have employed a wide range of approaches or perspectives for allocating and recovering their costs for providing service, often through a combination of fixed and variable charges. The percentage of revenues derived from the fixed and variable charges should be proportional to each system's expenditures and must not exceed the cost of providing service.

Many of the District's costs are fixed costs that do not vary by the level of service provided, such as operational and staff costs, as well as costs for building and maintaining infrastructure. Some of these costs are related to the number of customers, but most of the fixed costs are related to the total capacity of the water system. Fixed costs related to system capacity can reasonably be apportioned by meter size or variable, usage-based rate recovery in recognition that both units of measure reasonably reflect customer usage driving the District to incur capacity-related costs. For example, a share of the fixed cost of salaries related to water production can reasonably be recovered from usage-based charges as these costs are incurred to provide water supply to meet customer can pull from the water system. Likewise, debt service payments may be fixed annual costs, but it is reasonable to recover some of these costs from usage-based rates as the costs are incurred to fund infrastructure that will improve the water delivery system.

While there is no single correct approach, BWA believes that costs should be allocated within a reasonable range that reflects both a) underlying cost causation, to the extent such causation can reasonably be determined or estimated, and b) the policy preferences of the agency in cases where a range of reasonable approaches can be justified.

5.1 Rate Structure Scenarios

BWA developed and presented the following three rate structure scenarios to the Board:

- Scenario 1, 15 CCF Base Continue to include base use of 15 CCF with the meter charge
- Scenario 2, 10 CCF Base Include base use of 10 CCF with the meter charge
- Scenario 3 Uniform Rate include no base use with the meter charge

BWA recommended the District consider transitioning to a uniform rate structure and the Board agreed and chose to move forward with Scenario 3.

5.2 Functional Allocation

There must be a cost-based nexus between the revenue requirement from the cash flow and the proposed rates. The nexus is created by allocating the expenses and offsetting non-rate revenues to functional components and then dividing each functional component's revenue requirements by the allocations units most reasonably related to each function. A functional component reflects a grouping of the utility's expenses whose magnitude is driven by the quantity of a specific unit-of-measure. For example, costs allocated to the customer functional component are driven by the number of customers served by the water enterprise.

The functional components used in this study are as follows:

- **Customer** Fixed costs are recovered per customer. Fixed costs or costs related to serving each customer were allocated to this category.
- **Capacity** Fixed costs are recovered per Meter Equivalent Unit (MEU). Fixed costs or costs related to system capacity were allocated to this category.
- All Volume Costs reasonably recovered volumetrically were allocated to this category. Volumetric costs are recovered per unit of volume (100 cubic feet (CCF)) based on all projected demand.

Related expenses and non-rate revenues were grouped into the following allocation categories before being allocated to each functional category:

- Transmission and Distribution expenses include the operating costs related to the District's potable water distribution systems. These costs are recovered from the All Volume functional component because they are sized to meet peak water demands.
- Administration Expenses and non-rate revenues were allocated to reflect that some administrative costs are
 driven by the number of customers (Customer) and some are driven by the size of the system (Capacity).
- Source of Supply expenses include the operating costs related to the wells. These costs are recovered partially from the Capacity and All Volume functional components because the wells must meet peak capacity but also provide redundancy.
- Debt Service and Capital expenses and non-rate revenues are allocated 60% to Capacity and 40% to All Volume because these costs are fixed or one-time expenses but are related to the overall capacity of the system which is driven by the projected volume of water sold.

The following tables show a breakdown of the water utility's expenses and offsetting revenues and how they are allocated by function. The proportional allocation is then applied to the rate revenue requirement so that the

rates are proportional to the cost of service provided. To recover the allocated revenue requirements proportionally to the service provided, a unit cost must be derived. Critical to this step is using the unit which relates to the function. The allocation amounts are based on an average of the expenses over the next five years.

Table 6 – Functional Allocation

	<u>Projec</u>	ted 5-Year Avei	rage				
Functional Allocation	Amount	Offsetting Revenue	Allocation Amount	Customer	Capacity	All Volume	Total

5.3 Water Rate Derivation

Bi-Monthly Fixed Service Charges

This charge applies to all active services. It recovers the Capacity functional component revenue requirement on a per MEU basis. The MEU varies by meter size. MEU ratios are based on the AWWA meter equivalent ratio for each meter size.

Bi-Monthly Water Use Charges

These charges apply to every unit of water sold. It recovers the All Volume functional component revenue requirement on a unit (CCF) basis. Non-residential have a uniform volumetric rate while residential customers have a two-tier rate structure.

The following table shows the water rate allocation units and total revenue requirement by functional component and the derivation of rates. Volumetric rates for each class and tier are calculated based on the actual volumes of average and peak use water billed in the previous year.

Table 7 - Water Rate Derivation

5.6 Regional Residential Bill Comparison

The following chart compares the water bills for a typical single-family home to those of other regional agencies. Rates can vary widely from agency to agency due to a wide range of factors. The survey shown is for comparative purposes only.

6 WASTEWATER FINANCIAL PLAN

6.1 Wastewater Financial Overview

BWA conducted an independent evaluation of wastewater enterprise finances and concluded the previous rate increases have put the wastewater enterprise in a sound financial position.

The District relies almost solely on revenues from wastewater rates to fund the costs of providing service. As such, wastewater rates must be set at levels adequate to fund the costs of operating and maintaining the wastewater system, fund necessary capital improvements to keep the wastewater system in good operating condition.

6.2 Key Drivers of Rate Increases

The District is facing several manageable financial challenges that will drive the need for rate increases in upcoming years. Key drivers of future rate increases are summarized below.

Capital Improvement Funding Needs

The District takes a proactive approach to maintaining its wastewater system, which requires ongoing repair and improvement projects. Accounting for construction cost inflation, the District anticipates funding approximately \$1,2 million of capital improvement projects over the next 5 years.

Ongoing Operating Cost Inflation

The District faces annual cost inflation due to annual increases in a range of expenses including staffing, utilities, insurance, supplies, etc. On top of rate increases needed for capital improvements, annual rate increases are needed to keep revenues aligned with cost inflation and prevent rates from falling behind the cost of providing service. Wastewater cost inflation has historically been higher than the Consumer Price Index (CPI) for consumer goods and services. Historically inflation has typically remained consistently around 3%, but recently inflation has reached forty-year highs with the CPI and ENR CCI exceeding 7% in 2022. It is not expected that inflation will remain at such high levels in the future and for the purposes of this rate study average annual inflation is projected to be 4.5%; in-line with the District's budget inflationary projections.

Wastewater Reserve Funds

Maintaining a prudent minimal level of fund reserves provides a financial cushion for dealing with unanticipated expenses, revenue shortfails, and non-catastrophic emergency capital repairs. BWA developed a financial plan designed to maintain prudent reserve levels that are in-line with industry standards.

Debt Service Coverage

Most municipal debt requires that the issuer generate net operating revenues of 1.25 times the total annual debt service payment or greater. This is referred to as "debt service coverage". To support a strong credit rating and good financial health, the current BWA recommends the District maintain a minimum debt coverage ratio of 1.3 times the annual payment or greater.

6.3 Financial Plan Assumptions

The financial projections incorporate the latest information available and a number of reasonable and slightly conservative assumptions for planning purposes. Key assumptions include:

Revenue Assumptions

- Wastewater rate revenues are based on estimated revenues for the current fiscal year.
- Rates proposed to be adopted in December 2023 will be effective on January 1, 2024, with rate adjustments planned to become effective on July 1 of each of the subsequent four fiscal years beginning July 1, 2024.
- To be conservative and ensure revenues will be sufficient, BWA assumed growth to be two new single family
- connections added per year.
- Interest earnings are projected based on the annual beginning fund balance multiplied by the projected interest rate. The interest rate projections are conservatively based on recent and anticipated interest rates.

Expense Assumptions

- Operating and maintenance costs are primarily based on the 2023/24 budget.
- Operating costs are projected to escalate at 4.5% per year to account for cost inflation.
- Debt service projections are based on outstanding debt schedules and projected issuances of new debt.
- The District is projected to need to finance \$1,000,000 of capital spending. BWA assumed the District will get SRF financing but included a conservative interest rate of 5%.
- Capital improvement costs are based on the most recent engineering cost estimates. Capital costs include a.
 4.5% annual construction cost inflation factor for the next five years.
- Upon the completion of the Onsite Hypo Generation at WWTP project the District should not need to continue purchasing chlorine. This is reflected in the expenses projections.

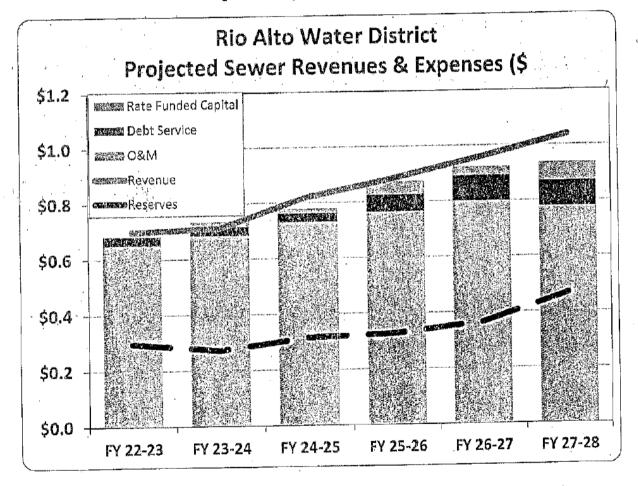

6.4 Cash Flow Projections

Long-term cash-flow projections were developed based on assumptions and key drivers of future rate increases described above. The projections were used to determine the wastewater utility's annual revenue requirements and project required wastewater rate revenue increases. The long-term cash-flow projections incorporate the latest information available from the District's budget, annual reports, capital spending projections, and metered water demand data, as well as a number of reasonable assumptions developed with input from the District. The overall rate revenue increases shown for each of the following scenarios are designed to fund the District's cost of providing service, maintain roughly balanced budgets, maintain healthy debt service coverage, and maintain prudent reserves. The projections indicate the need for increases for wastewater rate revenues for each of the next five fiscal years. Actual impacts to customers' wastewater bills will vary based on strength category and water use, due to the outcome of the updated cost-of-service analysis.

In future years, the District can re-evaluate its finances and revenue requirements and adjust rates as needed based on updated projections. However, while the District always has the flexibility to implement rate adjustments that are lower than adopted pursuant to Proposition 218, future rates cannot exceed adopted increases without going through the Proposition 218 process again. Rates adopted pursuant to Proposition 218 are essentially future rate caps.

The following figure visually depicts the cash-flow projections with the proposed rate increases for the next five years. Projected expenses are summarized into key categories. The figure also shows the projected fund reserves at the end of each fiscal year.

Detailed, long-term, cash-flow projections for this scenario are shown in the following table.

Sewer Fund	FY 22-23	FY 23-24	FY 24-25	FY 25-26	FY 26-27	FY 27-28

7 WASTEWATER COST OF SERVICE ANALYSIS AND RATE DERIVATION

BWA derived updated wastewater rates that account for both a) the overall rate increases identified in the financial projections, and b) proposed rate structure modifications. The proposed rates are designed to equitably apportion and recover costs from the District's customer base. The basic methodology used to develop new rates includes the following steps:

BARTLE WELLS ASSOCIATES Rio Alto Water District – Water and Wastewater Rate Study 2023

7.1 Flows and Loadings

The following table estimates the flows and loadings of each customer class based on analysis of recent winter and annual water consumption data and wastewater strength assignments for each customer class.

- Residential flows per unit are based on analysis of historical winter water use data. Residential wastewater strength concentrations are based on estimates previously published by the State Water Resources Control Board (SWRCB). Residential wastewater strength concentrations have increased over the past decade as the volume of wastewater flow has decreased due to transition to low-flow toilets, waterefficient appliances, and other water conservation and efficiency measures.
- Commercial estimated wastewater flows are adjusted to account for a 20% RTS factor. The RTS factor was based on an analysis of winter and summer water use.

The resulting flow and strength projections for each class are shown in the following table and provide the basis for allocating costs and deriving equitable wastewater rates for each customer class.

				Public Water I

⁵ "MG" stands for 1,000 gallons

⁶ "GPD" stands for gallons per day

⁷ "BOD" stands for biochemical oxygen demand

⁸ "TSS" stands for total suspended solids

⁹ State Water Resource Control Board (SWRCB) Suidelines for Wastewater Agencies

7.2 Functional Allocation

The next step in the cost-of-service analysis is to assign wastewater system costs in each allocation category for revenue recovery via the functional cost components of flow, BOD (biochemical oxygen demand), and TSS (total suspended solids). While there is no single correct approach for cost allocation, BWA believes that costs should be allocated within a reasonable range that reflects both a) underlying cost causation, to the extent such causation can reasonably be determined or estimated, and b) the policy preferences of the agency in cases where a range of reasonable approaches can be justified. This process is intended to proportionately allocate costs to each functional component to determine the revenue requirement for each component. The allocations to each functional component were based on input from District staff.

The functional cost components are described as follows:

- Flow reflects costs associated with the volume of wastewater collected and treated. .
- BOD reflects costs associated with treating BOD. e
- TSS reflects costs associated with treating TSS. ۲

The following table shows a breakdown of the wastewater utility's expenses, how they are allocated and calculates the unit rates per unit of flow, BOD and TSS. The wastewater rate revenue requirements from the prior table for each functional component are divided by the units related to each function.

Table 12 - Functional Cost Allocation

7.7 Regional Wastewater Rate Survey

The following charts compare the wastewater and wastewater bills for a typical single-family home to those of other regional agencies.

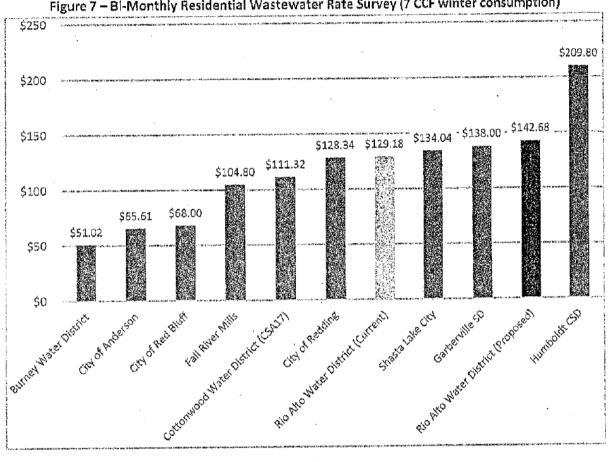

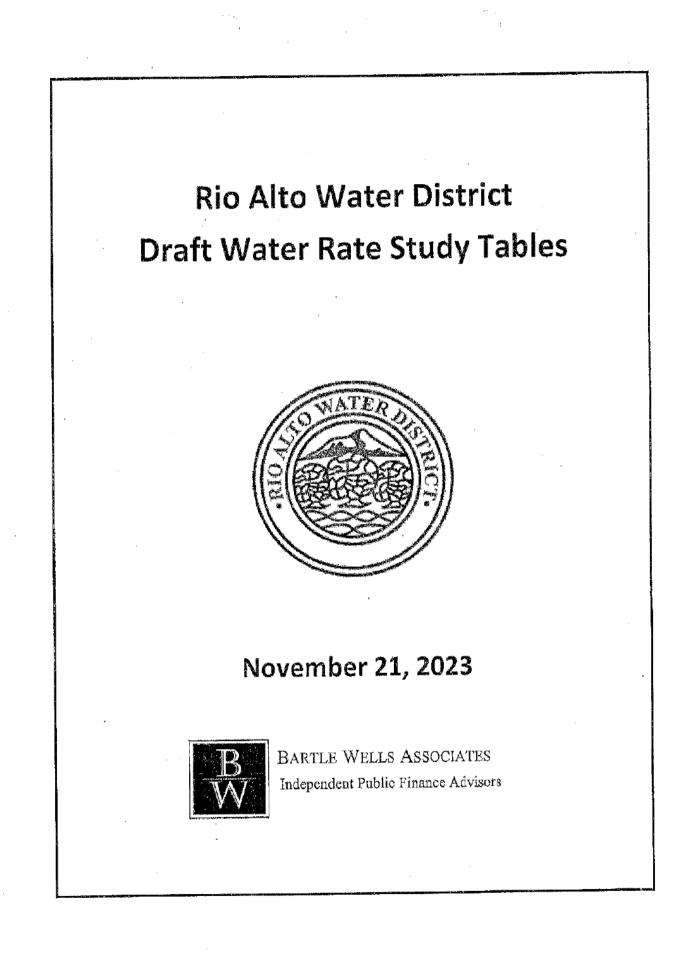

Figure 7 – Bi-Monthly Residential Wastewater Rate Survey (7 CCF winter consumption)
